## Effective Factors on Reducing the Number of Spectators in Iran Football Premier League

<sup>1</sup>Amir Reza Khadem Azghadi\*, <sup>1</sup>Mohammad Reza Boroumand, <sup>1</sup>Mohammad Hosein Salari

<sup>1</sup>Department of Sport Management and Media, Faculty of Sport Sciences, Shahid Beheshti University, Tehran, Iran.

### ABSTRACT

Because of reducing the number of spectators of football premier league, this study is seeking for identifying factors put the most impact on this decline. The statistical population consisted of all spectators in Iran football premier league in 2015-16, out of which 395 spectators were randomly selected as the research samples. The data were collected via a researcher-made questionnaire. The first part of the questionnaire included demographic information and the second part, at 6 aspects, includes 35 questions analyzing the reasons for reducing the number of spectators in Iran's football Premier League. For analyzing data, it was used from first and second order confirmatory factor analysis based on structural equations through using SPSS 20 and LISREL 8.8 software. The results of first order confirmatory factor analysis showed that the measurement model of factors affecting on reducing the number of spectators of football premier league is an appropriate model and model parameters are significant. All factors are approved as effective variables on reducing the number of spectators of football premier league. The results also showed that the second order measurement model of effective factors on reducing the number of spectators of football premier league are also appropriate, and economic, facilitative, administrative, technical, cultural-social, and personal-family respectively put the most effects on reducing the number of spectators of football premier league. It is suggested for the sport marketers to analyze identified factors in this research and develop applicable strategies and guidelines for them.

**KEY WORDS:** *Reducing the Number of Spectators, Football Premier League of Iran.*

### INTRODUCTION

The industry of professional sporting events is increasingly turning into a social trend towards the presence of people as spectators at the sporting events all over the world (1). There are many forms of endorsement and support behavior of clubs among which the most important one is the presence of spectators in the stadium (2). According to Hansen and Gauthier (1989), the most important factor in attracting investment in professional sports and

championships is to increase the number of spectators who indirectly obtain earnings for clubs and professional leagues through directly purchasing the tickets of the tournament (3) and in addition to gain identity to sports leagues, they have a major contribution in the revenue via attracting sponsors and sale of television rights and other auxiliary services (4). In their study, Theodorakis *et al.* (2009) reported that Manchester United football team earned 157.5 million Euros (including day tickets, season

tickets and membership) from entrance booths and 29 home games in the season 2006-2007 which is equal to 44% of its total income in the season (5) while in Iran, ticketing provides the small source of clubs' income and the financial costs of clubs are mostly funded by state agencies (6). The study on Iran football premier league by Ghorbani (2015) showed that in recent years, the number of spectators in stadiums have experienced a significant reduction in a way that the number of spectators dropped more than 50% within three seasons of 2012-2013 to 2014-2015, and in five seasons (2010-2011 to 2014-2015), 70% of the capacity of the stadium was empty and in the season 2014-2015, it reached 81.3% and only 18.7 of the capacity of stadiums were filled by the spectators (7). The lack of significant welcome of sport fans is one of businesses' obstacles for financial supports from sports and teams (8). A variety of factors affect the number of spectators of sporting events among which technical factors, economic factors, demographic factors, social and cultural factors, management staff and necessary facilities for spectators interested in attending the clubs can be mentioned. The attractiveness of a match depends on the importance of the play, the skill level of athletes and its position in a league or tournament (9). Economic factors are also divided into two controllable and uncontrollable categories. For example, ticket price and level of income are controllable and uncontrollable, respectively (10). Demographic variables such as age, sex, education, occupation, income level, etc. also affect the presence of individuals at sporting events (11). Access to stadium, stadium beauty, stadium cleanliness, comfortable seats and safety and security of stadiums are also very important factors in attracting spectators (12). Thus, due to reducing the number of spectators in Iran Football Premier League in recent years, understanding the factors with the greatest impact on the decline seems necessary.

## MATERIALS AND METHODS

With regard to the purpose, the present study is applied and in terms of data collection, it is descriptive-survey research.

**Participants.** The statistical population consisted of all spectators in Iran football premier league in 2015-16. The study samples

were randomly selected as 384 individuals according to Morgan table (for large populations) so that considering the possible sample loss, 435 questionnaires were distributed and 427 questionnaires were eventually collected. A total of 395 questionnaires were finally analyzed.

**Tolls.** The data were collected via a researcher-made questionnaire. For this purpose, after collecting 438 articles and selecting and examining 177 studies, 6 national research projects, 26 books and interviews with 8 experts and executives in the field of football, the research team extracted 109 questions. Then, they selected 62 questions related to the subject. After evaluating the face validity, Content Validity Ratio (CVR) was used to confirm the content validity. In addition, we sent the questions to 10 experts in the field of sport management in the form of expert questionnaire. By examining every single question by the formula related to CVR, the validity of 35 questions was confirmed under the rubric of 6 variables. The mentioned questionnaire was made up of two parts: The first part included demographic information including age, level of education, occupation, marital status, family income and the way to buy ticket. The second part reviewed the reasons for the reduction in the number of spectators of Iran Premium League in six dimensions including economic factors (questions 1 to 5), managerial factors (questions 5 to 11), technical factors (questions 11 to 17), cultural-social factors (questions 17 to 23), personal-familial factors (questions 23 to 27) and facility-equipment factors (questions 27 to 35). In order to investigate the reliability of the questionnaire, 35 questionnaires were distributed among the spectators. The reliability was calculated using Cronbach's alpha coefficient. The results of Cronbach's alpha coefficient for all the main dimensions showed that the questionnaire enjoyed high degree of reliability ( $\alpha > 0.7$ ). After having the questionnaire confirmed and obtaining recommendations from the university to Iranian Football League Organization, we received entry permit to the football stadiums to distribute the questionnaires among the spectators and gather the required data. We motivated the spectators to complete the questionnaires by incentives including

equipment donated for cheering their favorite teams and buying tickets for some of them.

**Statistical Analysis.** Skewness and kurtosis tests were used for the normality of the data. Given that the skewness and kurtosis of all data were between -2 and 2, data distribution was normal; therefore, parametric statistics were used to analyze the data. KMO and Bartlett's tests were also used to measure the sampling adequacy indicator (Table 1).

**Table 1.** KMO and Bartlett's test

Kaiser-Meyer-Olkin Measure (KMO)		0.710
Chi square		389.669
Bartlett's Test	Degree of freedom	36
	significance	0.001

According to Table 1, given that the KMO index value is higher than 0.6 (0.71), the sampling adequacy indicator shows the proper value in the calculation. Also, given that the chi-square coverage area (0.001) for Bartlett's test is lower than 0.05, the status of the index is fit and that there is no significant relationship between the variables.

Confirmatory factor analysis based on structural equation model was used to test and confirm the sub-scales and variables of the questionnaire. In other words, construct validity (factor) of the questionnaire was used. In order to evaluate the effect of the confirmed first-order factors with the higher order variable, second-order confirmatory factor analysis was used. For statistical calculations, SPSS 20 and LISREL 8.8 software were run.

## RESULTS

Demographic findings showed that 83.55% of the spectators were less than 30 years of age. 69.04% were single, 46.6% had school diploma and 47.6% were students (school and college students). In terms of income, 82% of spectators had income of less than 600 dollars a month. 41% of the spectators had the desire to buy ticket via the Internet, whereas 40% had the desire to buy ticket in stadium box office. Only 3.3% liked to buy the tickets for the while season. The results of the first-order factor analysis model of the effective factors on reducing the number of

spectators of Iran football Premier League are presented in Table 2.

The results of the first-order confirmatory factor analysis revealed that the measurement model of effective factors on reducing the number of spectators of Iran football Premier League was fit and all the numbers and parameters of the model were significant. In addition, the effect of all components as effective variables on reducing the number of spectators of Iran football Premier League was confirmed.

Measurement model fit indices are presented in Table 3. They indicate that the measurement model is fit.

As can be seen in Table 3, index  $\chi^2/DF$  is smaller than 3, RMSEA index with a value of 0.071 is less than 0.08, PNFI with a value of 0.62 is above the cut-off point i.e. 0.5 and all NFI, RFI, and CFI indicators are more than 0.90 which all represent excellent and reasonable fit of the first order factors in reducing the number of spectators of Iran football Premier League. Hence, the confirmatory factor analysis substantiated that the model had an acceptable and appropriate validity.

The results of the second-order confirmatory factor analysis of the effective factors on reducing the number of spectators of Iran football Premier League in two standard and significant coefficient modes are given in Figures 1 and 2 below.

The results revealed that the second-order measurement model of effective factors on reducing the number of spectators of Iran football Premier League was fit and all the numbers and parameters of the model were significant and that economic factors, facility-equipment factors, managerial factors, technical factors, cultural-social factors, and personal-familial factors had the greatest impact on the reduction of the number of spectators of Iran football Premier League. Model fit indices are presented in Table 4.

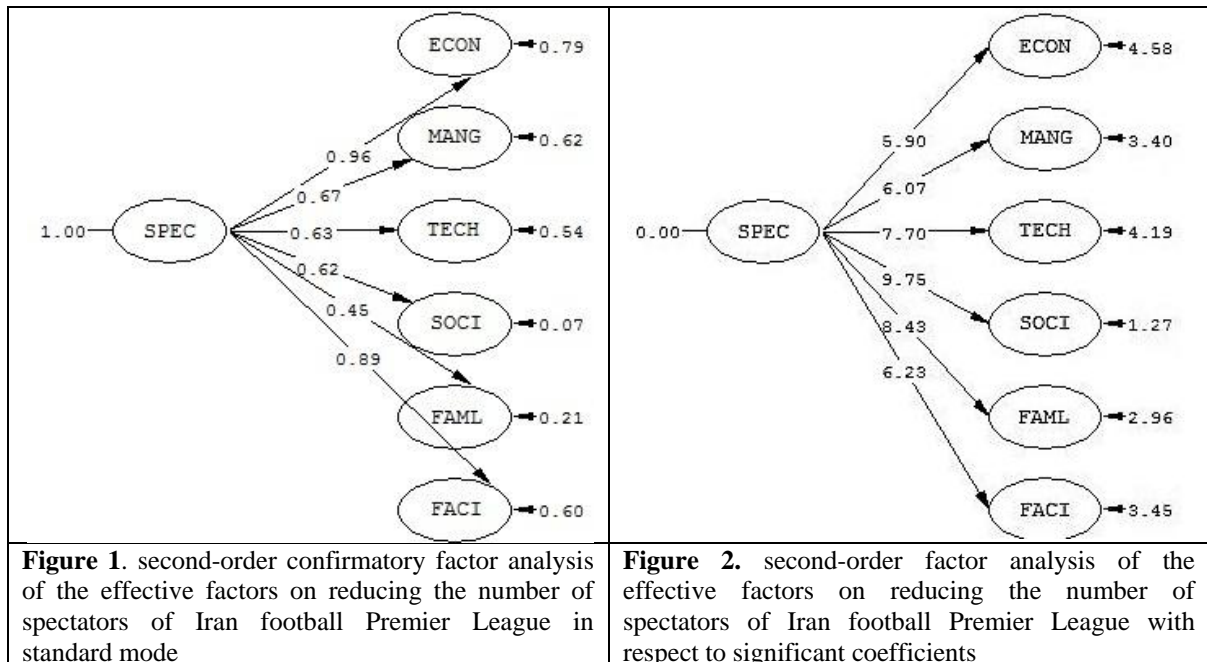

As can be seen in Table 4, the value of index  $\chi^2/DF$  is smaller than 3, RMSEA index with a value of 0.71 is less than 0.1, PNFI with a value of 0.59 is above the cut-off point i.e. 0.5 and all NFI, RFI, and CFI indicators are more than 0.90 which all represent excellent and reasonable fit of the second order factors in reducing the number of spectators of Iran football Premier League. Hence, the confirmatory factor analysis substantiated that the model had an acceptable and appropriate validity.

**Table 2.** The results of first-order factor analysis of the effective factors on reducing the number of spectators of Iran football Premier League

Variable	Code	Component	Confirmatory factor (r)	t-value
<b>Economic</b>	<b>E1</b>	High prices of the tournament tickets	0.73	10.87
	<b>E2</b>	High cost of transportation to the stadium	0.65	7.37
	<b>E3</b>	Expensive food and beverages in the stadium	0.67	11.19
	<b>E4</b>	Low levels of family income	0.61	8.34
<b>Managerial</b>	<b>M1</b>	Holding the competition at the wrong time (working days, in the middle of the week, bad hours ...)	0.56	9.44
	<b>M2</b>	Inappropriate treatment of the Executive Force deployed in the stadium	0.41	10.30
	<b>M3</b>	Lack of presence of women in stadiums	0.50	10.06
	<b>M4</b>	Absence of Directors with specialty in football at the club's top management	0.51	9.62
	<b>M5</b>	Lack of appropriate facilities for spectators in games away from home	0.69	10.11
	<b>M6</b>	Poor status of tournament ticket sales	0.58	7.58
<b>Technical</b>	<b>F1</b>	The absence of star players in the favorite team	0.60	11.19
	<b>F2</b>	Poor performance of the Favorite team	0.56	11.08
	<b>F3</b>	Lack of the beauty of the game and low technical level	0.63	9.92
	<b>F4</b>	Absence of outstanding foreign coaches and players in the league	0.43	11.03
	<b>F5</b>	Poor judgment of some referees throughout the season	0.67	5.91
	<b>F6</b>	Poor performance of national football teams in international competitions	0.53	7.21
<b>Social-cultural</b>	<b>FR1</b>	Lack of leisure activities utility to start the game and at half	0.69	5.80
	<b>FR2</b>	Lack of contest, sweepstakes and free gifts in the stadium tournament venue	0.41	3.09
	<b>FR3</b>	Conflict and violence in stadiums	0.40	8.19
	<b>FR4</b>	Obscenities and profanities and vulgar words in stadiums	0.58	7.34
	<b>FR5</b>	Throwing objects, chairs and explosives in the stadium during the match	0.45	4.43
	<b>FR6</b>	Lack of respect for the spectators when buying tickets, entry to and outside the club	0.69	4.60
<b>Personal-familial</b>	<b>SH1</b>	Inability to attend with family	0.91	7.58
	<b>SH2</b>	Interruptions from other viewers	0.44	11.19
	<b>SH3</b>	Declining loyalty to the favorite team	0.36	10.76
	<b>SH4</b>	Scaring the risks leading to bodily injury	0.58	10.00
<b>Equipment-facility</b>	<b>T1</b>	The lack of incentives such as discounted, half-price and seasonal tickets for the spectators	0.58	10.93
	<b>T2</b>	Lack of easy access to stadiums	0.61	10.61
	<b>T3</b>	Lack of beauty, comfort, security and cleanliness of the stadiums	0.71	10.97
	<b>T4</b>	Lack of clean bathrooms in the stadiums	0.80	11.12
	<b>T5</b>	Difficult, time-consuming, and unsafe exit from the stadiums and parking lots after the game	0.67	9.99
	<b>T6</b>	Failure to provide proper facilities for children at stadiums	0.39	7.80
	<b>T7</b>	Lack of appropriate health services at stadiums	0.50	7.65
	<b>T8</b>	Shortage, dirt and bustle of immense service returned from the stadium	0.74	11.19
	<b>T9</b>	Lack of proper facilities for people with disabilities in stadiums	0.59	10.34

**DISCUSSION AND CONCLUSION**

Investigating demographic factors is the first step to understand customer behavior in marketing (13). According to the study results, most spectators (83/55%) were under 30 years representing that the spectators of Iran Football Premier League are young. These results are consistent with those of the study conducted by Ma'soumi (2008) and Elahi (2010) (14, 15). However, they are inconsistent with the results of the study by

Trail et al (2003) and Won and Kitamura (2007) (16, 17). This may pertain to cultural differences as well as the entry to the stadiums together with the family in addition to demographic differences.

69.04% of the spectators in stadiums were single. This is consistent with the results of some studies conducted in Iran including those by Elahi (2010) and Nikbakhsh, Moshref Javadi, and Mozafari (2008) (14, 18). In Iran, Women cannot go to stadiums which can be

the reason for lack of desire for married individuals to watch games in the stadiums.

Since most of the spectators were young and students (school or university students) (4.6%) in terms of employment status and as the demographic combination of the spectators was young, surveying the income status of the samples showed that most of them had no good financial status and that 82% of them earned less than 600 dollars a month. Most of them (41%) tended to buy the tickets on the Internet which may be due to the availability of the Internet for most people and their familiarity with its advantages.

Given the study results, the effects of all the identified variables on reducing the number of spectators were confirmed and that economic, facility-equipment, managerial, technical, socio-cultural, and personal-familial variables had the greatest impacts on reducing the number of spectators in Iran football premier league, respectively.

Economic and facility-equipment factors played a large role in and had the highest effect on reducing the presence of spectators in stadiums and the high cost of tickets for the game among from economic factors and sanitary and cleanliness facilities of stadium among from the components of facilities had the greatest impact on reducing the presence of spectators in stadiums. Fallahi, Asadi, and Khabiri (2009) stated that economic factors such as an increase in the price of tickets and the costs of access to the stadiums had a negative effect on the presence of spectators in stadiums (19). In addition, in their study, Tojjari *et al.* (2010) stated that economic factors had an important role in encouraging spectators for their presence in stadiums (20). Donihue, Findlay, and Newberry (2007) stated that an increase in the ticket price reduced the presence of spectators (21). On facility-equipment factors, Yusof, See, and Yusof (2008) emphasized the significance of facilities in stadiums and pointed out that paying more attention to these cases was essential for the managers of stadiums and acknowledged that the physical space of the stadium was of utmost importance to satisfy spectators (22). This was also confirmed by other researchers including Hall, O'Mahony,

and Vieceli (2010), and Lambrecht, Kaefer, and Ramenofsky (2009) (23, 24). In a study on 486 football spectators, Fallahi, Asadi, and Khabiri (2010) concluded that a high percentage of Iranian spectators were under 25 years and the most important factors affecting their presence were economic factors (the price of ticket and the cost of transportation) and facilitates factors (Beauty, cleanliness, convenience and availability of food) which is quite consistent with the results obtained in this study (25).

After economic and facility-equipment factors, technical and managerial factors had the greatest impact on reducing spectators in stadiums and of management components, lack of appropriate welfare facilities was in the first priority in the games outside home and the poor situation of ticket sale and tournaments at inappropriate time were in the next orders. Of the technical factors, poor judgment of some referees throughout the season was in the first priority and the lack of attractiveness and beauty in the matches and low technical level were in the next priorities. Based on the results of the study, the effect of socio-cultural and personal-family factors was also confirmed on reducing the number of spectators in stadiums. Although these factors were in the last ranks, they had an effect on reducing the number of spectators in stadiums and had been the reasons for their absence. Among socio-cultural factors, lack of enough respect for the spectators when to buy a ticket, to enter in the stadiums, and to leave there were on the first priority and insults and vulgar words, fighting and violent behaviors in stadiums were in the next priorities. Of personal-familial factors, the impossibility of presence of family was the first priority. According to Tojjari *et al.* (2010), for the spectators, the most important case in socio-cultural factors was that they wanted to have a healthy cultural atmosphere in stadiums and they became sad for the use of curse words by some spectators (20) which is consistent with the results of the studies in this field by Brokaw, Stone, and Jones (2006) (26). In their study, they found that factors

such as violence, use of obscene words and creation of tension had an inverse relationship with the presence of spectators in stadiums (26). Due to the prohibition of the presence of women in Iranian stadiums, if there is a possibility for the presence of spectators along with their families, in addition to change in the demographics in stadiums, there will be more people in the stadium so that on one hand, the stadium's male atmosphere is changed which helps reduce aggressive behavior (27) and on the other hand, the football clubs will benefit more from that.

### APPLICABLE REMARKS

- According to the study results, it is suggested that sport marketers analyze and evaluate the factors identified in this study and find correct and executable strategies and solutions for them so as to resolve or reduce the rate of problems the spectators face with in order to observe more spectators as well as to have more income for the football clubs.
