Dear [Seyed Morteza](#),

Thomson Reuters has accepted the journal for a new edition of Web of Science launching this fall.

The new edition, called the [Emerging Sources Citation Index](#), will make your content [discoverable](#) and [citable](#) on Web of Science while the journal awaits its re-evaluation for the Web of Science Core collection.

Coverage will begin with journal content published in 2015. Attached is information on how you can share this content with Thomson Reuters, although since your journal is full open access, I believe our production team can access the files directly from the journal's web site and no FTP setup will be required.

Also attached is a fact sheet describing the Emerging Sources index and its benefits. If you have questions or would like additional information, please be in touch.

We're very excited to partner with you on this new venture.

Sincerely,

 Nancy Thornton
 Editor
 Editorial Development

EMERGING SOURCES CITATION INDEX

A NEW EDITION OF WEB OF SCIENCE™

COMING NOVEMBER 2015

THE VALUE OF COVERAGE IN WEB OF SCIENCE

Increasing the Visibility of Scholarly Research

With content from nearly 12,000 top tier international and regional journals in the Science Citation Index Expanded™ (SCIE), the Social Sciences Citation Index® (SSCI), and the Arts & Humanities Citation Index® (AHCI); over 160,000 proceedings in the Conference Proceedings Citation Index; and over 66,000 books in the Book Citation Index, Web of Science sets the benchmark for information on research across the sciences, social sciences, and arts and humanities. Only Web of Science indexes every paper in the journals it covers and captures all contributing institutions, no matter how many there are. The rigor of our methodology and level of expert human curation are second to none. It's this quality and depth of content that sets Web of Science apart from other research databases.

Introducing the Emerging Sources Citation Index

This year, Thomson Reuters is launching the Emerging Sources Citation Index, which will extend the universe of publications in Web of Science to include high-quality, peer-reviewed publications of regional importance and in emerging scientific fields. ESCI will also make content important to funders, key opinion leaders, and evaluators visible in Web of Science even if it has not yet impacted an international audience.

For Authors and Researchers

A journal in ESCI is searchable, discoverable, and citable; authors and researchers get real-time insight into a journal's citation performance while the content is considered for inclusion in other Web of Science collections. You can measure the contribution of an article in specific disciplines and identify potential collaborators for expanded research.

For Publishers

ESCI provides publishers with an additional level of inclusion in Web of Science and increased transparency regarding Thomson Reuters editorial processes. Journals in ESCI have passed an initial editorial evaluation and continue to be considered for inclusion in products such as SCIE, SSCI, and AHCI, which have rigorous evaluation processes and selection criteria.

For Libraries

ESCI provides Web of Science users with expanded options to discover relevant scholarly content. ESCI is an edition of Web of Science and subscribers will gain access through their subscription.
